Carrer Summary

Full stack developer with 5 years of experience. On recent years, I have been leading small multidisciplinary teams to help produce high quality web products. My experience have allowed me to create websites / webapps / apps and REST APIs from scratch by using agile methodologies and keep communications with key stakeholders. When required, I have the ability to work alone. Always preferring collaborative work due to my interpersonal skills. My goal is to provide high quality technical solutions that matches business requirements.

Work Experience

Head of Development

Swoon Creative Media | Vancouver, Canada | November 2020 - Current

Achievements:

- Lead a development and design team in the creation of digital products
- Provided best code practices and created continuous integration pipelines
- Advised clients about pros and cons of using specific web technologies / solutions

API Developer

Tata Consultancy Services | Guadalajara, Mexico | July 2020 - November 2020

Achievements:

- Developed application programming interfaces based on REST (REST APIs)
- Generated code to guarantee the quality of technical solutions (Testing)
- Implemented code updates by continuous integration / GIT

Projects

East Side Culture Crawl

ECC is the biggest art event on east Vancouver. With more than 10k attendees and 1k+ artists per year, they required to migrate from their old platform (Angular / Drupal) to a system with better control to fit their needs. For this project I was in charge of all the technical architecture to be able to provide a great experience for the artists, who can create their personal profile's and maintain communications with their audience through chat and general public, who can look for artists in different listings and map. <https://culturecraw.ca/>

Technologies used: [WordPress \(PHP\)](#) [Vue.js](#) [NuxtJS](#) [REST API](#) [Tailwind](#)

Remenu

Remenu is an online menu service for restaurants. I set the architecture to be a Laravel monolith for the admin dashboard but also built a REST API to be consumed by a NuxtJS app due to the business need to rank the users restaurant's on Google. Users can create categories and products to display them in a menu where customers can create a shopping cart and order directly on WhatsApp <https://remenu.co/>

Technologies used: [Laravel \(PHP\)](#) [REST API](#) [Vue.js](#) [NuxtJS](#) [Tailwind](#)

Programming Skills

Backend

PHP
Laravel
Wordpress
REST API

Frontend

HTML
CSS
JavaScript
Vue.js
Nuxt
Tailwind CSS

Tools

Docker
